

Special Cylinder Applications

Reinforced cylinder

Enhanced resistance to breaking attempts.

Emergency cylinder

Operated with keys inserted and rotated on opposite sides, enabling both sides to be permanently operational.

Break Secure cylinder

Patented Euro profile cylinder, specially developed by Mul-T-Lock to meet a specific need: enhancing resistance to manipulation attacks. Unlike ordinary cylinders that tend to break in the middle when manipulated, allowing the door to be opened by attacker Break Secure snaps at the front. This keeps the door locked and the burglars outside, and permits the owners to open the cylinder with their original Mul-T-Lock keys when they return.

Anti-ligature thumbturn with external override

Innovative thumbturn with emergency override mechanism, specially designed to address the risk of self-harm within psychiatric and probationary type accommodation facilities.

Allows occupant privacy, while enabling immediate access for medical or supervisory staff if necessary.
